This system contains approximately 2,000 references to materials available for use in education and training programs related to water quality. Entries are catalogued with all typical library reference information. Special classifications have been added to define training applications. Materials can be selected based on subject area, educational level, type of training and type of material (i.e., film, printed, audio tape, slides, etc.) Each entry also contains an abstract, source and cost. The Subject Index provides controlled subject access to training materials retained in IRIS. Each item is categorized by up to 16 subjects, all of which are selected from a controlled thesaurus supporting the system.
